

ShinrAI

Service overview · September 2026

Keep the meaning. Protect personal data.

Detect personal data and replace it with consistent stand-ins before text reaches your AI workflow. Choose the managed API on STACKIT in Germany or deploy ShinrAI on your own infrastructure.

ShinrAI 1.3

15 locales · Hebrew beta

STACKIT

Germany

€39 / month

Starter · 50,000 records

Make text useful without passing identity along

Personal data appears in support messages, documents and internal workflows. ShinrAI detects sensitive spans and supports replacement, masking or labels, so your application can decide what reaches an AI service.

A simple integration

- 01 Detect personal data in your text.
- 02 Replace it with consistent stand-ins. Keep the mapping in your application.
- 03 Send the transformed text to your workflow and restore mapped values when appropriate.

Evaluate on your own use case

ShinrAI 1.3 supports 15 locales, including Hebrew as beta. Detection quality depends on language, document type and entity. Review the published benchmark methods and test representative examples before rollout.

Benchmarks

Choose where processing happens

Managed API on STACKIT

Hosted in Germany. Select a monthly plan or a non-expiring record pack, complete business checkout and create your API key in Dashboard. Billing and invoices are handled by Stripe.

Offline deployment

Run ShinrAI on your infrastructure. Export an installation challenge, obtain a signed activation file and import it locally. The container tracks usage; a new signed file adds purchased quota.

Understand your consumption

One base record covers up to 1,000 Unicode code points per text, rounded up. Standard uses 1 record, Batch 0.5 and Real-Time 1.6 per base record. Plan allowance is used first, followed by pack records.

Keep control of data

Synchronous request text and replacement mappings are processed in memory. Asynchronous jobs require encrypted temporary storage for up to 24 hours. Keep restoration mappings securely in your own application.

Partners

EECC

ShinrAI co-development partner.

VITAC IT-Systeme

Certified ShinrAI implementation and training partner.

ELBA Technologies

Certified ShinrAI implementation and training partner.
